- [Unique Application - Gold](#)
- [Unique Application - Silver](#)
- [Unique Application - Bronze](#)
- [Winning with Pyng](#)

Three years ago Bliss HTA sat down with the CEO of Cybertouch (a Crestron OEM) to discuss building a dedicated theater for his residence. The client agreed to add a separate wing to the home so that a proper theater could be installed. Bliss HTA designed, engineered, and built out the entire room. From electrical to HVAC requirements to of course the audio and video. Bliss HTA had just completed another project with the Procise® lineup and we were very happy with the results so we decided to use the Procise PSPHD and the PROAMP 7x400 as the heart of the system. Crestron also provided a C2N-AMP-4X100 to drive the background music in the new adjacent bar and dining room through Crestron Essence® in-wall speakers. The NSP-1 Network Streaming Player makes it easy to connect the client's iPhone to share his music lists. The 6 zones of lighting for the theater and another 6 zones for the bar and dining area were handled by the Crestron CLS-C6. Control of the HVAC system is done through the CHV-TSTAT. The 7.1 speaker system is by Wisdom®. The Sony® 4K projector handles the video, and Stewart® is the screen of choice. Jeremiah Flaherty of SH Acoustics handled the acoustic design and the audio calibration. Of course the theater and adjoining rooms are controlled by a Crestron CP-3 with an iPad® as the interface. After 3 years of designing & building an addition to the home, the project was worth the additional work and expense as this theater is the focal point of the house. The sound system is truly impressive delivering a better experience than a commercial movie theater! The homeowner is now planning to automate the entire home as the ease and convenience of the Crestron system is just too good to resist.
